ABSTRACTED-PUB-NO: US 6197282B
BASIC-ABSTRACT:

A process for preparing a dispersion of fine UV light screening particles comprises subjecting an ingredient mixture of at least one type of inorganic particles having a UV light screening capability, at least one silicone dispersant of modified and reactive silicones, and a silicone oil, to milling and/or high-pressure dispersion.

Also claimed are a powder and a cosmetic preparation containing the above mentioned UV light screening particles.

USE - The powder and dispersant containing the UV light screening particles are useful for preparing cosmetic preparations, etc..

ADVANTAGE - Since the particles have good transparency, they do not destroy the colour of cosmetics and any amount of the particles can be utilised for preparations. The particles are coated with the silicone dispersant, they do not cause deterioration in the base material of cosmetics and they provide smoothness, spreadability and homogeneity to cosmetic preparations.
ABSTRACTED-PUB-NO:

WO 9745097A
EQUIVALENT-ABSTRACTS:

A process for preparing a dispersion of fine UV light screening particles comprises subjecting an ingredient mixture of at least one type of inorganic particles having a UV light screening capability, at least one silicone dispersant of modified and reactive silicones, and a silicone oil, to milling and/or high-pressure dispersion.

Also claimed are a powder and a cosmetic preparation containing the above mentioned UV light screening particles.

USE - The powder and dispersant containing the UV light screening particles are useful for preparing cosmetic preparations, etc..

ADVANTAGE - Since the particles have good transparency, they do not destroy the colour of cosmetics and any amount of the particles can be utilised for preparations. The particles are coated with the silicone dispersant, they do not cause deterioration in the base material of cosmetics and they provide smoothness, spreadability and homogeneity to cosmetic preparations.
